

Joyce Femina J

Frontend Developer — React.js — TypeScript — AI-Driven Applications

9500588405 — feminajo98@gmail.com — in/joyce-femina — github/feminajo — Chennai, India

Professional Summary

Frontend Developer with 4+ years building high-performance React and TypeScript applications, currently leading UI development for an AI-powered multi-model LLM platform. Skilled in performance optimization, scalable architecture, and real-time streaming interfaces that improve user experience and system efficiency.

Key Achievements

- Cut AI chatbot response latency by ~40% via OpenAI streaming API with incremental rendering.
- Reduced UI inconsistency bugs by ~30% by enforcing TypeScript strict mode across 15+ components.
- Built a shared component library achieving 40% code reuse across 3 SBI application modules.
- Improved scroll performance by ~20% on Walmart's product pages by eliminating redundant DOM updates.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks & Libraries: React.js, React Hooks, Redux Toolkit, Context API, Material UI, Tailwind CSS, Next.js (familiar)

AI & LLM Integration: OpenAI API, Anthropic Claude API, Gemini API, Streaming UI, Prompt Engineering, Multi-model Orchestration

Testing & Quality: Jest, React Testing Library, Cross-browser Testing, ESLint, Prettier

Build & Deployment: Vite, Webpack, Git, GitHub Actions, CI/CD pipelines, Vercel

Tools: Postman, Jira, VS Code, Figma (handoff), SonarQube (exposure)

Professional Experience

Cavin Infotech Pvt Limited (A CavinKare Group)

Sep 2025 – Present

Frontend Developer – AI/LLM Applications — Chennai, India

Nebula – Internal Multi-Model AI Chatbot Platform

Tech Stack: React.js, TypeScript, Redux Toolkit, Tailwind CSS, OpenAI API, Material UI

- Designed frontend architecture from scratch – component hierarchy, state management patterns, and API abstraction layer adopted by the full team.
- Implemented real-time streaming via OpenAI API, cutting perceived response latency by ~40% over batch rendering.
- Built a model-switching module for GPT-4, Claude, and Gemini with zero page reloads, enabling live A/B testing of LLM providers.
- Developed 15+ strictly-typed React components, reducing UI bug reports by ~30% post-launch.
- Resolved 2 race conditions in streaming state by profiling with React DevTools, ensuring stability for 200+ concurrent users.

SmartPetBowl – IoT-based Pet Health Monitoring Platform

Tech Stack: React.js, TypeScript, Redux Toolkit, Tailwind CSS, Material UI, IoT

- Designed and developed a scalable frontend application to visualize real-time pet health and nutrition data collected from IoT-enabled devices (smart collar and feeding bowl).
- Built interactive dashboards to track metrics such as food intake, nutrient levels, and overall pet health, enabling pet owners to monitor and manage their pets effectively.
- Integrated real-time data streams from IoT devices and backend APIs, ensuring seamless and accurate data synchronization in the UI.
- Implemented role-based access control (Admin, User, Customer) with full CRUD operations for managing pet profiles, device data, and user activities.
- Developed 15+ reusable and strictly-typed React components, improving code maintainability and reducing UI inconsistencies.
- Optimized rendering performance for continuous data updates, ensuring smooth user experience in data-heavy views.

Tata Consultancy Services (TCS)

Dec 2021 – May 2025

UI Developer — Chennai, India

SBI Banking Application – Core Banking Portal

Tech Stack: React.js, JavaScript, Material UI, REST APIs

- Migrated 6 legacy jQuery modules to React, reducing codebase size by ~25% and improving SonarQube maintainability scores.
- Built 20+ responsive UI components used by 10,000+ daily active users.
- Integrated 15+ REST APIs with centralized error handling and loading state management.
- Wrote Jest and React Testing Library tests, achieving 70%+ coverage on the shared component library.
- Built a validation-driven multi-step form system for complex banking workflows.
- Created a shared component library achieving 40% code reuse; mentored 2 junior developers.

Walmart Retail Project – E-commerce UI Enhancements

Tech Stack: JavaScript (ES6+), HTML5, CSS3

- Delivered 10+ UI features across sprint cycles in collaboration with cross-functional teams.
- Refactored product listing rendering to eliminate redundant DOM updates, improving scroll performance by ~20% on low-end devices.
- Resolved production-critical bugs within SLA; integrated CI build checks catching 3 regression categories pre-staging.

Professional Development

- Exploring Next.js (App Router, SSR/SSG) to expand into full-stack React development.
- Deepening knowledge of LLM application patterns – RAG, tool calling, and agent-based UI systems.
- Practicing advanced TypeScript patterns – generics, utility types, and type-safe API contracts.

Education

B.Tech – Electronics and Media Technology

2016 – 2020

Karunya Institute of Technology and Sciences

Certifications

- Frontend Developer (React) – HackerRank — 2025
- React – The Complete Guide – Udemy — 2024
